Instructions for the mediator

This guide is for the **Mediator** role. You run **Mode B**: you create a room for two parties, set the time, lead a live session with AI support, and accompany the parties toward an agreement.

> **Tip.** Until onboarding is complete, **Help** in the header opens these instructions. In the console, **Help** is in the sidebar. The chat assistant replies in **EN | UA**. You also see the party instruction. Ask about waits, **Sides**, schedule, or Mode A/B.

If you are Party A/B — parties.md. If you are a platform administrator — admin.md.

10. Pre-session lobby
11. Live session
12. Ending and results
13. Language and logout
14. Role limits
15. Tips and typical situations

1. What you can and cannot do

In the Mediator Console you:

- complete your own onboarding (welcome, consent, tests);
- create **negotiation rooms** (Mode B);

- manage parties under **Sides** (from **your rooms only**);
- copy login/password and generate a **Magic Link** for parties in your rooms;
- schedule date, time, and duration; manage the schedule in **Calendar**;
- open the **lobby** and start the session (including **Start now** when everyone is ready);
- in the live session, work with profiles, questions, options, compromise, and agreement;
- finish with **Complete session**;
- review the log and results PDF; delete your own rooms.

> **You do not** manage the registry of other mediators, API keys, agent prompts, or the RAG corpus — that is the administrator. Mode A (admin) rooms are not shown in your console.

2. Sign-in and onboarding

The **administrator** creates the account under **Mediators**. You receive a login psylex_... and a password (or a Magic Link).

1. Open **Login**.
2. Enter login and password.
3. If onboarding is not finished — the same steps as parties, with mediator copy.

Step	Screen	Action
Welcome	**Welcome, Mediator**	**Begin Mediator Setup**
Consent	**Disclaimer & Consent**	Check the box + **Proceed to Next Step**
Tests	**Mediator Assessment**	Four modules → **Personal AI Bot** → **Ready** → **Next Step**

Test processing can take **up to two hours**. After onboarding, **Mediator Console** → **Rooms** opens.

3. Mediator Console

Left nav (order):

1. **Rooms** — your rooms;
2. **Sides** — parties from your rooms;
3. **Calendar** — session schedule;
4. **Help**, **EN | UA**, **Logout**.

Above Help in the sidebar during lobby / live session, the **attention dock** shows waits, party readiness, and the session timer.

Path /mediator redirects to **Rooms**.

4. Negotiation rooms

Page: **Negotiation Rooms**. Only rooms **you** created.

Columns: **Room title**, **Room description**, **Jurisdiction**, **Scheduled time**, **Status** (**Not ready** / **Ready** / **Complete**), **Session**.

Search: **Search…**. Button **New Room**.

In the **Session** column:

- **Open pre-session lobby** — schedule exists, prep ready, session not started;
- **Open live session** — session already in progress;
- after completion — room card only.

Click a row to open the room card.

5. Creating a room and access

1. **New Room**.
2. **Room details**: title, description; **Jurisdiction** (**Ukraine** or **United States** + for the US **State / territory / Federal**). Jurisdiction cannot be changed after creation.
3. For **Party A** and **Party B**:

- **Create new participant** — **Title / Name**, **Description** (new login psylex_… and password); or
- **Add existing participant** — search by login or name (**only parties from your rooms**; roomless accounts and other mediators' parties are hidden).

1. **Create Room** / **Cancel**.

The same person cannot fill both slots in one room.

Giving parties access

On the room card under **Participants**:

- **Copy Credentials** (login and password);
- **Magic Link** — one-time link valid **72 hours** (auto sign-in / **Continue** without JS).

Ask parties to complete onboarding and dispute intake using the party instruction.

6. Sides

Menu **Sides** — registry scoped to your practice.

- You see parties that belong to **at least one of your rooms**.
- Parties with **no room** are **hidden**.
- Columns: title, login, role, rooms, tests (T1–T4), bot (BP), actions.

Actions:

- **Edit** title / description;
- **Delete party** (with cascading room rules);
- □ menu: **Redo T1…T4**, **Redo all tests**, **Redo bot prompt**, **Redo all** (with confirmation) □ **Retest requested.**

Credentials (login/password/Magic Link) are copied from the **room card**, not from the Sides list.

Administrators see **all** parties (including roomless) in their console.

7. Room card

Block	What the mediator can do
Header	Title, date, jurisdiction
Mediation details	After start — dialogue, votes, agreement, **Download results**
Mediation schedule	Date, time, duration, readiness, lobby / session links
Pipeline & mediation log	Timeline of preparation and the session
Room details	Title and description **view only**
Participants	Profile / tests, **Request profile update**, login/password, **Copy Credentials**, **Magic Link**
Delete room	Two options (see below)

Request profile update clears tests, bot, and related data and asks the party to retake onboarding.

Readiness indicators: **Party A/B ready**, profile readiness, **AI analysis**. Incomplete pipeline steps may show **Generating…**.

Delete

- **Delete room only** — party accounts remain;
- **Delete room and parties** — also deletes those party accounts (and related rooms per product rules).

Both require confirmation and cannot be undone.

8. Session schedule

In **Mediation schedule**:

1. **Date**, **Hour**, **Minutes** (5-minute steps).
2. **Duration**: 30 minutes … 4 hours (30-minute steps).
3. Time must be in the future.
4. **Save schedule** → **Schedule saved**.

Parties are notified that a session was scheduled. Changing the time resets **Start Mediation** clicks — all three must click again.

Overlapping schedules for one participant are rejected — pick another time.

You can change the schedule until the session starts. After start, fields lock. Links: **Open pre-session lobby** / **Open live session** / completed mark.

9. Calendar

Calendar → **Session calendar**.

- Views: **Today**, **Day**, **Week**, **Month** (week starts Sunday in EN).
- Right: **Upcoming sessions** and **Rooms without a schedule** (**Schedule** → room card).
- Drag to move / resize duration, then save.
- If the session is **Started**, the schedule cannot be changed.
- **Open room**; lobby / live session links may also appear.

10. Pre-session lobby

Open pre-session lobby.

When you can start

- both parties finished tests and dispute intake;

- AI analysis is complete;
- a schedule is saved;
- it is now **no earlier than 10 minutes** before the scheduled start.

How to start

1. Enter the lobby ahead of time.
2. Click **Start Mediation** when the button is active.
3. Wait until Party A and Party B click as well. Statuses of all three are visible.
4. If everyone clicked before the clock: everyone is ready; the session starts at the scheduled time, **or you can click Start now**.
5. **Start now** is available only when all three have already clicked start and the clock has not yet arrived — it starts the session immediately.
6. At the scheduled moment the system opens the live session automatically.

After mediation completes, the lobby redirects to the room card.

---

11. Live session

Console: three columns + **attention dock** in the sidebar. Header: **Return to rooms**, **Complete session** (with confirmation).

Timer **Session time remaining** — countdown for the scheduled duration (also in the dock).

Left — party profiles

Psychodynamic profiles of Party A and B. Use them for neutral questions; do not read sensitive wording “head-on” to the parties.

Center — message feed

Canonical text. Types: notice, opening, question, summary, moderation, nudge, options. **Translated** badge + show original.

Attention dock

Example states:

Kind	Example
Wait	Waiting for Party A / B to answer
Ready	Parties have replied — send the next question or generate options

Wait	Generating question suggestions / options / compromise / agreement…
Ready	Question suggestions / compromise draft / agreement draft ready
Wait	Waiting for parties to vote
Ready	Both rejected the compromise / both accepted — you can complete the session
Flash	Party voted / replied / accepted or rejected

Right — controls

Audience

- **Both** — shared channel;
- **Party A** / **Party B** — caucus.

AI question generate/send is available only when Party A or B is selected (not **Both**). Custom messages work for all audiences.

Questions from AI

1. **Generate question options**
2. Choose a candidate under **Question candidates**
3. Optionally **Edit question** / **Help me phrase this**
4. **Send to party**

Your own question

Your question → **Send to party**. Empty text is rejected. AI candidates are not cleared.

Solution options

Generate solution options when dialogue has enough material. Parties vote on their own.

Vote discrepancy

1. **Propose / edit compromise** → fields → **Publish compromise for vote**
2. **Return to dialogue** — clears votes and options (chat stays)
3. Use **Complete session** in the header if needed

Compromise

Parties **do not** see the draft until you publish. After publish both are notified; after one votes — wait for the other.

Agreement draft

When votes match (or both accept a compromise): parties see waiting-for-finalize until you publish.

1. Edit **title**, **shared narrative**, **obligations** (+ deadlines); **Add obligation** / **Remove**
2. **Save draft** → **Publish to parties**
3. Parties click **I accept**. After mutual accept, finish with **Complete session** if the session has not already closed.

12. Ending and results

After **Complete session** or agreement finale: **Session finished. Returning to room details...** → room card.

Mediation details: dialogue, options and votes, compromise, agreement or no-agreement outcome, **Download results**.

PDF: **Legislation** → **Solution** → **Agreement** / **Terms**. No psychodynamic chapter. Email is a stub.

13. Language and logout

- **EN | UA** changes console, calendar, session labels, Help, and chat.
- **Logout** → login page.

14. Role limits

Capability	Mediator	Administrator
Own Mode B rooms	Yes	Sees all
Mode A rooms	No	Yes
Sides	Own rooms only (no roomless)	All, including roomless
Mediator registry	No	Yes
Settings, prompts, RAG, API	No	Yes
Edit room title after creation	No (view)	Yes
Copy login/password	Yes	Yes
Magic Link for own parties	Yes	Yes (anyone)

Calendar and live session	Yes	Schedule on card mostly view
Delete own room	Yes (two modes)	Any room

15. Tips and typical situations

Parties are not “Ready”. Check the log and indicators (**Generating…**). Send the party instruction.

I do not see a party under Sides. Only your rooms; roomless and other mediators’ parties are hidden.

We rescheduled — parties “disappeared” from start. Start clicks were reset — tell them the new time.

Magic Link. Generate from the room card for your parties; 72 hours, one-time.

Parties are waiting for compromise / agreement. Remember to **Publish…** after reviewing the draft.

Both accepted the agreement. Click **Complete session** if needed.

Neutrality. You facilitate communication; you do not represent either party. Legal blocks are information from sources, not advice.
