Instructions for the mediator

This guide is for the **Mediator** role. You run **Mode B**: you create a room for two parties, set the time, lead a live session with AI support, and accompany the parties toward an agreement.

> **Tip.** Until onboarding (tests) is complete, **Help** in the header opens these instructions. After you enter the console, the **Help** button is in the sidebar. The chat assistant replies in **EN | UA**. You also see the instruction for parties. Ask it about waits, **Sides**, schedule, or Mode A/B if you need a quick reminder.

If you are Party A/B, see parties.md. If you are a platform administrator — admin.md.

14. Role limits
15. Tips and typical situations

1. What you can do

In the Mediator Console you:

- complete your own onboarding (welcome, consent, tests);
- create **negotiation rooms** for Party A and Party B (Mode B);

- manage party accounts under **Sides** (parties from **your rooms only**);
- copy party login and password to send them access;
- see whether the parties are ready (tests, dispute description, AI analysis);
- schedule the date, time, and duration of the session;
- manage the schedule in **Calendar** (view, reschedule, change duration);
- open the **lobby** and start the session together with the parties;
- in the live session, review party profiles, generate or write questions, send them to the parties, generate solution options, edit and publish a compromise, edit and publish the agreement draft;
- review the preparation log, mediation details, and download results;
- delete your own rooms.

> **You do not** manage the registry of other mediators, API keys, agent prompts, or the RAG legal corpus — that is the administrator. Mode A rooms (created by an admin) do not belong to you and are not shown in the console.

2. Sign-in and first-time setup

The **administrator** creates the account under **Mediators**. You receive a login psylex_... and a password (or a Magic Link from the admin).

1. Open the **Login** page.
2. Enter login and password.
3. After a successful sign-in, if onboarding is not finished, the system takes you through the same steps as the parties, but with mediator copy.

Mediator onboarding

Step	Screen	Action
Welcome	**Welcome, Mediator**	**Begin Mediator Setup**
Consent	**Disclaimer & Consent**	Read the terms, check the box, **Proceed to Next Step**
Tests	**Mediator Assessment**	Complete four modules, wait for **Personal AI Bot Ready**, click **Next Step**

The four tests are the same as for parties: **What is my personality type**, **Face to face with fear**, **Character traits**, **Personality conflicts**. After each one, return to PsyLex and click **Update test status**. Processing can take up to two hours.

After onboarding, **Mediator Console** → **Rooms** opens.

3. Mediator Console

On the left:

- the **Mediator Console** label;
- **Rooms** — a list of your rooms;
- **Calendar** — session schedule;
- **Sides** — parties that belong to your rooms;
- **Help**, the **EN | UA** switcher, and **Logout**.

The home path /mediator immediately redirects to **Rooms**.

4. Negotiation rooms

Page: **Negotiation Rooms**. Only rooms that **you** created appear here.

Table columns:

- **Room title**, **Room description**, **Jurisdiction**;
- **Scheduled time**;
- **Status**: **Not ready** / **Ready** / **Complete**;
- **Session** — an action that depends on state.

Search: the **Search...** field. The **New Room** button creates a new case.

Preparation statuses

Status	Meaning
Not ready	The parties are still completing tests / the dispute description, or AI analysis is not finished
Ready	Both parties are ready, analysis is complete — you can run the session (after scheduling)
Complete	Mediation is finished

In the **Session** column:

- **Open pre-session lobby** — if there is a schedule and preparation is ready, and the session has not started;
- **Open live session** — if the session is already in progress;

- after completion, actions lead to the room card, not the live console.

Click a row to open the room card.

5. Creating a room and party access

1. Click **New Room**.
2. Fill in **Room details**:

- **Room title**, **Room description**;
- **Jurisdiction**: **Ukraine** (Ukrainian law and legal practice) or **United States** (United States law and legal practice).
- For the United States you must select **State / territory / Federal**. Jurisdiction determines which legal sources AI will retrieve. It cannot be changed after creation.

1. For **Party A** and **Party B**, choose either:

- **Create new** — enter **Title / Name** and **Description** (a new login psylex_... and password are generated); or
- **Add existing** — search by login or title and attach a returning participant (their tests and personal bot stay; they only fill dispute intake for this room).

1. Click **Create Room** (or **Cancel**).

The same person cannot fill both party slots in one room. You land on the room card.

How to give parties access

On the room card, in the **Participants** block for each party:

- copy **Login** and **Password** with **Copy Credentials** and send them to the party through a secure channel;
- the **Magic Link** button may be on the screen, but creating a link is available **only to the administrator**. If you need a one-time 72-hour link — ask the admin to generate it from the room card in the Admin Console.

Ask the parties to complete welcome, consent, tests, and the dispute description using the party instruction. Until they do, the room status stays **Not ready**.

When you choose **Add existing**, the search lists only parties that already appear in **your** rooms — not roomless / orphan accounts and not parties from other mediators' rooms.

6. Sides

Menu item **Sides** — the party registry scoped to your practice.

- You see parties that belong to **at least one of your rooms**.
- Parties with **no room** (roomless / orphan accounts) are **hidden**.
- Use the list to open a party card, review credentials, or reuse an existing party when creating a new room.

Administrators see **all** parties (including roomless) under the same menu name in the Admin Console.

7. Room card

Opens from the room list or from the calendar (**Open room**).

On the card:

Block	What the mediator can do
Header	Title, creation date, jurisdiction
Mediation details	After the session starts — dialogue, votes, agreement, **Download results**
Mediation schedule	Date, time, duration, readiness indicators, links to the lobby / live session
Pipeline & mediation log	Timeline: tests, dispute intake, AI agents, start and completion
Room details	Title and description **view only** (cannot be edited after creation)
Participants	Party details, profile readiness (profile ready date + tests date), **Request profile update**, login/password, **Copy Credentials**
Delete Room	Removes the room and memberships only. Party accounts stay for reuse. This cannot be undone

Request profile update clears the participant's tests, personal bot prompt, and related profile data and asks them to retake onboarding. Use it when tests are outdated; confirm before sending.

Indicators in the schedule:

- **Party A ready** / **Party B ready** — **Ready** or **Not ready** (dispute intake + mediation readiness for this room);

- Profile lines show **Profile ready** / **Not ready** with dates when available;
- **AI analysis complete** — the post-intake pipeline (profiles, interests, legal analysis). Incomplete pipeline steps may show **Generating…** while AI analysis is running.

Tip: you can schedule a time before full readiness, but the parties can **start the session** only when tests, the dispute description, and analysis are complete.

8. Session schedule

In the **Mediation schedule** block:

1. Choose **Date**, **Hour**, and **Minutes** (5-minute steps).
2. Choose **Duration**: 30 minutes, 1 hour, then in 30-minute steps up to 4 hours.
3. The time must be in the future.
4. Click **Save schedule**. You will see confirmation **Schedule saved**.

The parties receive the notification **A mediation session has been scheduled.** If you change a time that is already saved, previous **Start Mediation** clicks are reset — all three participants must click again.

A participant may belong to several rooms, but **cannot** have two overlapping scheduled or live sessions. If save fails with an overlap message, pick another time (or wait until their other session ends).

Language in the live session

Your **EN | UA** switcher sets the language you write and read. Party messages are translated to each viewer's language (**Translated** + show original). Use **Help me phrase this** on question drafts before sending. Solution options and agreement text are generated for each party's language when they differ.

You can change the schedule until the session starts. After start, the fields are locked.

When there is a schedule and preparation is ready:

- **Open pre-session lobby**
- after start — **Open live session**
- after the finale — the **Mediation completed** mark

9. Calendar

Menu item **Calendar** **Session calendar**.

- Views: **Today**, **Day**, **Week**, **Month** (in English, the week starts on Sunday).
- The calendar shows your scheduled sessions.
- On the right: **Upcoming sessions** and **Rooms without a schedule** (the **Schedule** button opens the room card).
- Click a session to view and change the schedule.
- Drag an event to reschedule; resize it to adjust duration; then save.
- If the session is already **Started**, the schedule cannot be changed.
- **Open room** leads to the card.

10. Pre-session lobby

Open pre-session lobby (from the room list or from the card).

When you can start

- both parties have finished tests and the dispute description;
- AI analysis is complete;
- a schedule is saved;
- it is now **no earlier than 10 minutes** before the scheduled start.

How to start

1. Enter the lobby ahead of time (ideally before the 10-minute window).
2. When the button is active, click **Start Mediation**.
3. Wait until Party A and Party B click as well. The statuses of all three participants are visible on the screen.
4. If everyone clicked before the clock: **Everyone is ready. Session starts at the scheduled time.**
5. At the scheduled moment the system opens the live session.

The session **does not** start before the scheduled time, even if everyone has already clicked start.

If someone opens the lobby after mediation is complete, they are redirected to the room card.

11. Live session

The mediator console has three columns, plus an **attention dock** in the sidebar for waits, party actions, and the session timer.

Left — **Party profiles**

Psychodynamic profiles of Party A and Party B. Use them to phrase questions neutrally and with

risks in mind, but do not read sensitive wording to the parties “head-on” if that could escalate the conflict.

Center — message feed

You see the canonical text (the full picture). Types: **Notice**, **Opening**, **Question**, **Summary**, **Moderation**, **Nudge**, **Options**.

The **Session time** timer shows how long the session has already been running (not the Mode A 60-minute countdown). The same timer appears in the attention dock.

Attention dock

The sidebar dock surfaces what needs attention without flooding the feed:

- waits (AI generating, party answering, publishing gates);
- party actions that require your next step;
- session elapsed time.

Right — controls

The **Party A** / **Party B** switcher sets who receives the next question.

Questions from AI

1. Click **Generate question options** (available in the opening/dialogue phases, until solution options have been generated).
2. Choose one of the three candidates in the **Question candidates** block.
3. If needed, click **Edit question**.
4. Click **Send to party**.

The party receives the question and the notification **You have a new question from the mediator.**

Your own question

The **Your question** field is text from you, without AI. Send it with **Send to party**. The system rejects empty text. Sending your own question **does not** clear the generated AI candidates — you can use them later.

The parties reply in their room. You see the replies in the feed.

Solution options

When the dialogue has produced enough material (this is your professional judgment; the parties have no separate “ready” button):

1. Click **Generate solution options**.

2. The system moves to voting; the parties receive **Solution options are ready to review.**

The parties then vote on their own. If the votes match — the system prepares a **draft agreement** for you to edit. If they differ — **vote discrepancy**.

Vote discrepancy

When votes differ, you can:

1. **Propose / edit compromise** — wait for the AI draft if needed, edit fields, then **Publish compromise for vote**.
2. **Return to dialogue** — clears votes and options (chat history stays) so you can continue the conversation and generate options again.
3. **End without agreement** — closes the session; the outcome is recorded in the activity log.

Compromise

AI prepares a draft, but the parties **do not** see it until you publish it.

Fields:

- **Canonical description (mediator view)**
- **Text for Party A / Text for Party B**
- **Legal information (not advice)**
- **Fulfillment likelihood**
- **Risks if refused**

Check neutrality and accuracy, edit if needed, click **Publish compromise for vote**. Both parties are notified and can vote **Accept compromise / Reject compromise**. After one party votes, they wait for the other; when both accept, they move toward the agreement phase (still gated on your publish).

Agreement draft (publish gate)

When votes match (or both accept a compromise), AI drafts a **third-person** shared agreement from the dialogue and the selected option. Parties see **Waiting for the mediator to finalize the agreement** until you publish. Both parties are notified when the phase moves to agreement / when you publish.

On your console:

1. Edit **title**, **shared narrative**, and **obligations** (each with an optional **deadline**). Obligations are case-specific from the dialogue — add, edit, or remove as needed.
2. **Save draft**, then **Publish to parties**.
3. Parties review the same document and click **I accept**. Mutual accept finalizes the session.

The session normally ends when the parties accept the agreement or reject the compromise (no mutual agreement). You can also click **End without agreement** on the live console (with confirmation) to close early.

Audience tabs (shared vs caucus)

On the live console, choose who receives your message:

- **Both** — shared channel; both parties see the message and each other's replies.
- **Party A** / **Party B** — caucus; only that side (and you) see the Q&A.

Your messages appear to parties as **Mediator: {your title}**. Custom messages stay available in every phase, including Voting. Solution options and both parties' votes are shown on your console.

12. Ending the session and results

When the phase becomes **Agreement** or **Completed** (including after you use **End session**):

1. The console shows **Session finished. Returning to room details...**
2. After a few seconds the room card opens.
3. If you open the live session or lobby again — you go straight to the room card.

On the card, click **Mediation details**:

- dialogue of both parties;
- options and votes;
- compromise votes;
- the agreement or the no-agreement outcome;
- **Download results** (PDF).

The results PDF chapters cover legislation / legal information, the agreed solution (or no-agreement note), and the agreement text. A psychodynamic profile chapter is **not** included in the agreement panel or the PDF. The email-send field is not active yet — save the PDF yourself.

13. Language and logout

- **EN | UA** in the sidebar changes the language of the console, calendar, session labels, Help, and chat-assistant replies.
- **Logout** returns you to the login page.

14. Role limits

Capability	Mediator	Administrator
Own Mode B rooms	Yes	Sees all, **Mediator rooms** tab
Mode A rooms	No	Yes
Sides (party registry)	Own rooms only (no roomless)	All parties, including roomless
Mediator registry	No	Yes
Settings, prompts, RAG, API keys	No	Yes
Edit room title / parties after creation	No (view)	Yes
Copy party login and password	Yes	Yes
Generate Magic Link	No (admin required)	Yes
Calendar and live session	Yes	Schedule on a mediator room card — view only
Delete own room	Yes	Can delete any room

15. Tips and typical situations

The parties are not “Ready”. Check the log: whether tests are passed, whether dispute intake was submitted, whether the pipeline finished. Schedule readiness may show **Generating…** while AI analysis runs. Send the parties a link to their instruction.

I do not see a party under Sides. Mediators only see parties from their own rooms. Roomless accounts and parties from other mediators’ rooms are hidden.

Can I schedule “ahead of time”? Yes. But the lobby will not let you start until preparation is complete and the 10-minute window has opened.

We rescheduled — the parties “disappeared” from start. That is expected: start clicks were reset. Tell the parties the new time.

I cannot see a room. You only see your own. Admin rooms (Mode A) are not in the Mediator Console.

Magic Link is not created. Contact the administrator.

The parties are waiting for a compromise. Do not forget **Publish compromise for vote** after you review the draft — otherwise they will see the waiting-for-publication state.

The parties are waiting for the agreement. After matching votes, edit the draft and click **Publish to parties** — they cannot accept until you publish.

Neutrality. You facilitate communication; you do not represent either party. PsyLex does not replace your professional judgment, legal advice, or therapy. Legal blocks in the options are information from sources, not advice.
