Instructions for Party A and Party B

This guide is for dispute participants — **Party A** and **Party B**. The interface and steps are the same; the only differences are the role label in the header (**Party A** or **Party B**, often with your case title, for example **Party A · Claimant**) and that in Mode A, Party A usually replies first.

> **Tip.** In the header, **Help** opens this instruction. The chat assistant in the corner of the screen answers questions from this text in the language you selected (**EN | UA**). PDF and DOCX downloads are available from the Help window. Ask it about waits, voting, or Mode A/B if you need a quick reminder.

If you are a mediator or an administrator, open mediator.md or admin.md.

Contents

1. What you can do
2. Signing in
3. Process stages
4. Welcome and consent
5. Psychological assessment
6. Describe your dispute
7. Lobby before mediation
8. Mode A session (self-guided with AI)
9. Mode B session (with a mediator)
10. Voting, compromise, and agreement
11. Downloading results
12. Language, logout, and reviewing earlier steps
13. Tips and typical situations

1. What you can do

As a party to the dispute you:

- sign in with a login and password or a **Magic Link**;
- complete welcome, consent, and four psychological tests;
- describe the dispute in your own words;

- wait until the other party is ready (and the mediator — in Mode B);
- take part in the mediation session: answer questions, vote on solution options, accept or reject a compromise, and confirm the agreement;
- download a PDF of the results;
- switch the interface language with **EN | UA** and log out of the account.

> **You do not** create a room, set the session time, or manage the other party. That is done by the administrator (Mode A) or the mediator (Mode B).

2. Signing in

The room organizer sends you an account: a login, a password, or a **Magic Link**.

Sign in with login and password

1. Open the PsyLex login page (**Login** on the home page).
2. Enter **Login** (it starts with psylex_) and **Password**.
3. If needed, click **Show password**.
4. Click **Sign in**.

If the details are wrong, you will see **Invalid credentials** or **Invalid login format**. Check the login and contact the person who sent you access.

Sign in with a Magic Link

1. Open the link from the email or message.
2. A confirmation page appears — click **Continue** to complete sign-in (the link is consumed only when you continue).
3. The system takes you to the next unfinished step.

> **The link is one-time** and valid for **72 hours**. If it has expired or already been used, you will see: **This magic link is invalid or has expired.** Ask for a new link or sign in with login and password.

After sign-in, the system opens the screen you need: welcome, tests, dispute description, lobby, or mediation room. If you take part in more than one room, you first see **My rooms** and choose which case to continue. You can open **My rooms** again from the header while signed in as a party.

Use **EN | UA** in the header for your interface language. In the session, messages from others appear in your language (marked **Translated**; you can show the original). Before sending, you can use **Help me phrase this** to clarify your draft without changing its meaning. Solution options

and the results PDF follow your interface language.

3. Process stages

On the left (or in the step navigation) you see six steps:

1. **Landing**
2. **Disclaimer**
3. **Test results**
4. **Dispute description**
5. **Mediation**
6. **Treaty**

You can move forward only after the current step is complete. Steps you have already finished can be opened in review mode (see section 12).

The header always shows:

- the **PsyLex** name;
- **My rooms** (when you have party access);
- your role badge: **Party A** or **Party B**, often with your title (for example **Party A · Claimant**);
- **Help**, the **EN | UA** switcher, and **Logout**;
- the banner: **Legal information, not legal advice.**

On the room page, the heading shows your role (and title) with the **room title** underneath.

Status notifications (toasters)

During lobby and the live session, waits and actions appear as **toasters** (top-left), not as long banners in the page body:

- **Amber** — wait (AI working, other party answering, generating options/compromise/agreement, waiting for the mediator);
- **Green** — your turn to act (new question, options ready, compromise ready, agreement ready).

You usually do not need to refresh the page; the room updates on its own.

4. Welcome and consent

Welcome

Screen: **Welcome to the application**.

It briefly explains that the tool helps you assess your psychological state and prepare for mediation. Your responses are **strictly confidential**.

Click **Start Assessment**.

Consent

Screen: **Disclaimer & Consent** □ the **Important Information** block.

Read the three points carefully:

1. the service does not provide professional legal advice and is not a substitute for therapy;
2. participation is voluntary — you may stop at any time;
3. your responses are confidential and protected.

Check the box:

> **I have read and agree to the terms of participation.**

Click **Proceed to Next Step**.

5. Psychological assessment

Screen: **Psychological Assessment**. You must complete **four modules** (each opens in a new tab):

Module	Purpose
What is my personality type	Core assessment
Face to face with fear	Emotional resilience
Character traits	In-depth analysis
Personality conflicts	Conflict dynamics

How to complete the tests

1. On the test card, click **Open test**.
2. Finish the questionnaire on the external page.
3. Return to PsyLex and click **Update test status**.
4. The status changes from **Not passed** to **Passed**.

> If the status does not update immediately — wait and click **Update test status** again. Processing after you submit a test can take **up to 30 minutes**.

Personal AI Bot

The **Personal AI Bot** card appears after the tests:

- **Locked** — finish all four tests first;
- **Pending** — the profile is being processed (up to 30 minutes);
- **Ready** — you can continue.

Click **Update bot status** if processing should already have finished. When the tests are passed and the bot status is **Ready**, click **Next Step**.

---

6. Describe your dispute

Screen: **Describe your dispute**. Answer honestly and in your own words — the other party does not see your answers directly; AI uses them to prepare the session.

Three questions:

1. **Please describe the dispute in your own words.**
2. **What is most important to you in this dispute?**
3. **What outcome would you consider acceptable?**

Click **Submit answers**. While the form is sending, the button shows **Submitting...**.

After that you enter the **Mediation readiness** lobby. AI analysis (profiles, interests, legal information) starts when **both parties** have submitted the dispute description and their bots are ready. This can take several minutes.

---

7. Lobby before mediation

Screen: **Mediation readiness**. The layout depends on the room mode.

Mode A — self-guided mediation with AI

You see:

- **Your status** — **Ready for mediation** or **Not ready for mediation**;
- **Opposite side** — the same indicator for the other party.

The **Start Mediation** button becomes available when:

1. both parties have finished onboarding and the dispute description;
2. AI has finished analysis (**Our analysis agents are preparing your mediation session...**);
3. the room has prepared opening messages.

Possible prompts:

Message	What to do
The opposite side is not ready for mediation yet...	Wait until the other party completes tests and the dispute description
Our analysis agents are preparing your mediation session...	Wait several minutes
The mediation agent is preparing your opening messages...	Wait about a minute
You clicked Start Mediation...	Wait until the other party clicks as well
The opposite side is ready to start...	Click **Start Mediation**

The session starts only when **both** parties have clicked **Start Mediation**.

Mode B — session with a mediator

The mediator sets the date and time. Until then you see: **Waiting for the mediator to schedule the session.**

When the schedule is saved, **Scheduled session** appears, along with the notification **A mediation session has been scheduled.**

The **Start Mediation** button opens **10 minutes** before the scheduled time. Until then you see a countdown: **Start becomes available in...**

The session starts when:

1. Party A, Party B, **and** the mediator have clicked **Start Mediation**;
2. the scheduled time has arrived (not earlier).

The screen shows the click status of all three participants. If you have already clicked: **You clicked Start Mediation.** If everyone is ready before the clock: **Everyone is ready. Session starts at the scheduled time.**

Notifications in Mode B:

- **You can now click Start Mediation.**
- **Another participant is ready to start.**
- **The mediation session has started.**

8. Mode A session (self-guided with AI)

Room: **Mediation room**. The phase is shown at the top.

Phase	What happens
Opening	AI greets the parties and sets the frame for the session
Dialogue	Up to three rounds of questions; the parties reply in turn
Generating options	AI prepares solution options
Voting	Each party chooses an option blindly (you cannot see which option the other party selected)
Second vote	If the choices differ — a compromise proposal
Agreement	A draft agreement for confirmation
Completed	Results and download

Timer

Session time remaining is a **60-minute** countdown. When time runs out, the session ends automatically (the system moves to options if dialogue was still in progress).

Dialogue

- Party A usually replies **first** in each round.
- When it is your turn: **Your turn to reply**. There is a **Reply time** timer (about 5 minutes).
- When it is the other party's turn: **Other party is answering**.
- Type your answer in **Type your substantive reply...** and click **Send reply**.

Write about the substance of the dispute. If a reply sounds like a personal attack, the system may show: **Please focus on the substance of the dispute.**

While AI prepares the next step: **The mediation agent is working on the next step. Please wait a moment.**

Moving to options early

During dialogue you can click **I am ready for solution options**. The move happens when **both** parties click this button. Otherwise dialogue continues for up to three rounds or until the 60 minutes end.

9. Mode B session (with a mediator)

The **mediator** leads the session. AI suggests questions and options, but a person decides what to send to the parties.

Differences from Mode A:

- the timer shows **elapsed** session time (**Session time**), not a 60-minute countdown;
- the mediator sends questions — to you or to the other party;
- you reply when the reply field is available (not necessarily strictly in turn, as in Mode A);
- there is no **I am ready for solution options** button — the mediator publishes the options;
- if the votes differ, a compromise appears only after the mediator publishes it (amber toast: waiting for the mediator to publish a compromise);
- a draft agreement appears for you only after the mediator **publishes** it (until then: waiting for the mediator to finalize the agreement).

Typical toasters during the session:

Toast	Action
New question from the mediator	Read it and send a reply
Solution options are ready	Choose an option
Compromise is ready — please vote	Accept or reject
Waiting for the other party to vote on the compromise	You already voted; wait for the other side
Draft agreement ready / waiting for mediator to finalize	Review and **I accept**, or wait until publish
Session completed	Review the results

Message at the start: **Mediator-facilitated session started. The mediator will guide the dialogue.**

10. Voting, compromise, and agreement

This stage is shared by both modes (with publication nuances in Mode B).

Solution options

The **Solution options** block appears. Each option may include:

- a description adapted for you;
- **Legal information (not advice)**;
- **Fulfillment likelihood**;
- **Risks if refused**.

Voting is **secret** until both parties have voted. Click **Select this option**. After that: **Your vote has been recorded. Waiting for the other party.**

- If both parties chose the **same** option move to **Agreement**.
- If the choices **differ** **Second vote** phase (compromise).

Compromise

You will see which option the other party chose, and a new compromise proposal (in Mode B — only after the mediator publishes it).

- **Accept compromise**
- **Reject compromise**

After you vote, a toast asks you to wait for the other party. If **both** parties accept — both move to waiting for the agreement draft (Mode B: until the mediator publishes). If at least one rejects — the session may end without mutual agreement (Mode A) or stay with the mediator to continue (Mode B).

Draft agreement

Screen: **Draft agreement**: text, terms, and a legal disclaimer.

In Mode B the draft appears only after the mediator publishes it. If you agree, click **I accept**. Then: **Waiting for the other party to accept.** When both parties have accepted: **Session completed** (Mode B may still wait for the mediator to complete the session).

Acceptance on the platform records the parties' voluntary choice. To give the document legal force, consult a licensed attorney — this is stated in the disclaimer on the agreement screen.

11. Downloading results

After completion, the **Download results** button is available. The **Mediation results** PDF includes numbered chapters such as:

- legislation / legal information and sources (the room's jurisdiction);
- the agreed solution (or a note that no agreement was reached);
- the draft agreement text and terms.

It does **not** include a psychodynamic profile chapter. The email field on this page is a stub for now: **Email delivery is coming soon. Use download for now.** Save the PDF yourself.

12. Language, logout, and reviewing earlier steps

- **EN | UA** in the header changes the interface language. Your answers are stored as you wrote them and are not translated automatically.

- **Logout** ends the session. The next time you sign in, you return to the unfinished step.
- Completed stages can be opened from the step navigation in review mode. Buttons: **Next** and **Back to current step**. Data cannot be edited in review.

13. Tips and typical situations

I cannot sign in. Check that the login starts with psylex_. If the Magic Link does not work, it may already have been used or 72 hours may have passed. Ask the organizer for new credentials.

I completed the test, but the status is “Not passed”. Click **Update test status**. Wait: processing can take up to 30 minutes.

The “Start Mediation” button is inactive (Mode A). The other party is not ready yet, or AI is still analyzing the dispute / preparing the room. You do not need to refresh the page — the status updates on its own.

The button is inactive (Mode B). The mediator has not scheduled a time yet, or there are more than 10 minutes until start, or one of the three participants has not clicked start.

The other party is slow to reply in Mode A. Wait for their turn or the reply timer. Do not close the tab during your turn.

The session ended without an agreement. This is a normal outcome if the compromise was rejected or time ran out without mutual agreement. You can still download the PDF.

Can the other party see my tests and dispute description? No. The other party sees only what appears in the mediation room (questions, dialogue replies, options, the agreement). Psychological results are used by AI (and by the mediator in Mode B) to prepare the session.

What should I do after the agreement? Download the PDF and, if needed, consult an attorney so the arrangement can be given legal force.
